

THANAPON POOTHONG

CRM ANALYTICS EXECUTIVE | ASPIRING ANALYTICS ENGINEER

thanapon.poonthong@gmail.com | 082-853-0217 | github.com/Thanapon23

PROFILE SUMMARY

CRM Analytics Executive at Minor International with a strong foundation in business logic, currently transitioning into an Analytics Engineering role, I have actively applied the Modern Data Stack (dbt, Airflow, BigQuery, Docker) through an end-to-end personal project. Driven by a lifelong learning mindset, I am committed to evolving my technical skills and bringing my perseverance to every challenge, eager to contribute my passion and effort to a professional data team.

SKILLS

Technical Skills

- **Data Transformation:** dbt (Data Build Tool)
- **Orchestration & Infrastructure:** Apache Airflow, Docker, Git
- **Cloud Data Warehouse:** Google BigQuery (GCP)
- **Languages:** SQL (Advanced - CTEs, Window Functions), Python (Pandas)

Soft skills

- Lifelong Learning Mindset
- Proactive & Structured Thinking
- Cross-functional Collaboration
- Can-do attitude
- Stakeholder Management

Language

- **Thai:** Native
- **English:** Intermediate

Analytics & Business Intelligence

- **BI Tools:** Power BI, Advanced Excel
- **Frameworks:** RFM Modeling, Customer Lifetime Value (CLV)
- **Methodology:** Root Cause Analysis (5 Whys)

Business & Domain Knowledge

- **Retail Customer Analytics:** Expertise in analyzing consumer behavior and retail trends.
- **Data Storytelling & Visualization:** Transforming complex data into actionable insights for stakeholders.
- **Marketing Knowledge:** Applying marketing principles to the results insight to data insights to recommend impactful business actions.

EDUCATION

Bachelor of Business Administration Major Marketing

Khon Kaen University (2017- 2021)

JOB EXPERIENCE

CRM Analytics Executive

Minor International Public Company Limited

(Dec 2023 - Present)

- **Analyze Customer Data:** Analyze Customer Data to understand trends and behaviors, producing monthly report to summarize customer insights and overall statistics.
- **Provide Customer's Insights to Stakeholders:** Collaborated with internal brands to understand their specific data needed and **providing customer data insights** to support their marketing objectives.
- **CRM System:** Worked closely with external vendor to **Monitor CRM system**, Set up campaign system mechanic, dealing with system issues and coordinate with operation teams to solve the problem.
- **Enhance SQL Script:** **Modify the SQL script** to updated with system changes and continuously **optimize query performance** from many data sources.
- **Data Modeling & Schema Alignment:** **Collaborated with the DE team to define and update data schemas**, ensuring all necessary fields were integrated into the Data Warehouse to support business requirements.
- **External Data Integration:** Managed data delivery from external vendors, proactively defining field specifications to ensure all necessary customer data points were accurately integrated.

Data Analyst

TQC Company Limited

(July 2023 - Nov 2023)

- **Automation report processing:** Successfully transformed predominantly manual report generation into an automated process, **enhancing efficiency and reducing manual efforts**.
 - **Workflow development:** **Developed data workflows** to efficiently extract, store, and present analytical findings, ensuring data accuracy and consistency throughout the process.
 - **Stakeholder Communication:** **Collaborated and communicated with stakeholders** involved in data operations, ensuring smooth data management.
-

SELF-PROJECTS

Voucher Analytics Pipeline Project | Project Repository: [dbt-airflow-vouchers-performance](#)

An end-to-end analytics engineering project that automated data pipeline to analyze voucher performance. Transforming raw sources into actionable insights on Google Sheets. Support the Marketing team in turning data insights into effective marketing strategies.

- **Data Ingestion:** **Automated the ingestion** of 8 CSV source tables into BigQuery using a Python-based engine, handling schema normalization and data cleaning with pandas.
 - **Transformation & Validation:** **Architected data models** using a Fact-Dimension schema in dbt; ensured 100% data integrity by implementing automated dbt tests before deployment.
 - **Data Delivery:** Automated synchronization of analytical models from **BigQuery to Google Sheets**, enabling self-service analytics for the marketing team.
 - **Orchestration:** Containerized the entire environment with Docker and orchestrated the full workflow (Ingest → Transform → Test → Deliver) using Apache Airflow DAGs.
-

Credit scoring analysis Project | Project Repository: [Credit-scoring-analysis](#)

Developed a predictive credit scoring model to categorize consumer risk levels, enabling more informed and effective business decision-making through behavioral analysis.

- **Data Engineering & Preprocessing:** Cleaned and normalized datasets by handling missing values and outliers, while performing **Exploratory Data Analysis (EDA)** to identify key variable relationships.
 - **Feature Engineering:** Evaluated variable predictiveness using **Weight of Evidence (WOE)** and **Information Value (IV)** techniques to enhance the model's accuracy.
 - **Model Development:** Built and tuned a **Logistic Regression** model, optimizing its predictive capabilities for reliable credit scoring.
 - **Insights & Visualization:** Translated complex model outputs into a visual grading system, providing clear, actionable conclusions for stakeholders.
-

The RFM Analysis Project | Project Repository: [RFM-Project](#)

By using the RFM model to **segment customers** based on their recency, frequency, and monetary value.

This model helps deeper understand group of customers and enables to use the right marketing strategies to each specific group effectively.

- Importing dataset from Kaggle and **defining task** in this project and clean the data.
 - Use Python to create **Recency Frequency Monetary (RFM)** Analysis.
 - Calculate **RFM scores** to separate customer segmentation.
 - Recommending for marketing strategies to **most value customer segment** that gained from RFM analysis.
-
